

# Arena I

Elite Turf Ryegrass

## Arena I turf perennial ryegrass

### Key features:

- Increased wear recovery
- Winter active
- Low temperature germination
- Rapid establishment
- Contains endophyte

Arena I turf perennial ryegrass is an all-purpose, highly winter active, 'Mediterranean-type' turf grass that is ideally suited to winter sports fields, or areas subject to high wear. Arena I also has the unique ability to germinate quickly under low temperatures down to 5°C. It establishes rapidly and reliably, especially in cooler conditions.

Arena I has a mid-green colour which helps to mask a *Poa annua* invasion and it has a proven history of excellent performance in sports fields.

### The turf to stage the world's greatest endeavours.

### Breeding history

Arena I was bred by utilising Mediterranean germplasm crossed with climatically adapted American material. The high winter activity of the Mediterranean germplasm means Arena I is able to continue growing in the colder months when other grasses have stopped. It has a high endophyte level, giving it resistance to many insects and pests. The inclusion of American genetics also gives the cultivar excellent summer performance.

### Sowing rate and maintenance

Arena I turf ryegrass can be sown at 30 - 50 g/m<sup>2</sup> (300 - 500 kg/ha). Use the higher seeding rate for faster establishment.

In new sports fields and winter over-seeded couchgrass, it should be sown at 400 - 500 kg/ha.
