

LAGERTHA TURF TALL FESCUE

Lagertha Tall Fescue

- Moderately fine, dense turf type tall fescue
- Dark green with excellent colour retention
- Excellent persistence without irrigation
- Contains endophyte
- Reduced mowing frequency
- Mowing height between 50 - 150 mm

Lagertha was bred from advanced American material developed over many years by Rutgers University. In New Zealand a selection was undertaken for turf performance, disease resistance and adaption by turf breeder Louise Carpenter.

Lagertha is a high quality, dark and fine turf tall fescue. Lagertha retains a green colour and an attractive appearance for longer in summer due to its strong deep root system. Lagertha has excellent persistence without irrigation in most drier regions on silt or clay soils when mowed at a height range of 50 - 150 mm.

Experts from earth to turf.
