## Quatro

### Sheep Fescue (*festuca ovina*)

Quatro sheep fescue is an extremely fine bladed bunchgrass that produces an exceptionally dense, deep, dark turf. It provides durable, attractive turf under a range of mowing heights, soil conditions and growing environments.

Quatro sheep fescue establishes rapidly from seed, exhibits good drought and heat tolerance, and will remain green under drought stress-induced dormancy. It is best adapted in southern regions of the temperate cool season zones where heat and humidity related diseases are minimal. It can be successfully utilised in full sun or shade, in parks, playgrounds, golf course tees, fairways and roughs. It is compatible in turfgrass blends containing Kentucky bluegrass, perennial ryegrass, colonial bentgrass and other fine fescues.

#### SOWING RATE

20 - 30 g/m<sup>2</sup> (200 - 300 kg/ha).

Full establishment can be expected after 12 - 14 weeks in normal growing conditions.

#### BENEFITS:

- High disease resistance.
- Excellent winter appearance.
- Improved wear tolerance.

	DENSITY	FINENESS	DISEASE RESISTENCE (Red Thread)	SALT TOLERANCE	CLOSE MOWING TOLERANCE
QUATRO	9.0	9.0	8.0	8.0	8.0
