

POGO®

TurfPro System

**Superior insight.
Scientific decisions.
Healthier turf.**

Advanced turf-intelligence

POGO® is an advanced turf-intelligence platform that delivers clear, actionable insights to optimise course performance. By integrating high-precision soil, weather, and other environmental measurements with powerful mapping tools, it identifies the key factors influencing turf health, performance, and playability.

At the core of the system, **POGO® TurfPro Cloud** delivers automated intelligence by analysing data from POGO® devices, weather inputs, and environmental sensors to generate fast, reliable insights.

Real time turf conditions in minutes

To use the POGO system, simply insert the sensor tines into the turf and tap the "Sample" button in the POGO® TurfPro Mobile app. Sync all data to TurfPro Cloud and visualise turf conditions within minutes.

Precision Data Mapping

Every POGO® measurement records essential turf variables along with precise, professional-grade GPS location data.

**Contact your local rep

Pin Position Management

With the integrated Pin Planner, schedule upcoming positions that directs staff where to place the pin using GPS and to automatically populate a pin sheet.

Record daily pin locations and correlate them with turf conditions measured by POGO® to gain insight into performance patterns and plan optimal future pin placements. The POGO® System also links with ezLocator's strategic pin placement service.

POGO® Features

- Integrated, professional-grade GPS receiver gives precise location to all measurements
- Infrared turf canopy heat index sensor
- Bluetooth to any iOS or Android device
- Industry-leading 2-year warranty

The POGO® devices work as an annual subscription, granting the user access to the full programme. If you choose to not subscribe, this model can just be used as a moisture meter.
