

Restore Granules **Granular soil wetting agent**

- Assists penetration of water into hydrophobic soils.
- Provides uniform wetting to enhance efficiency of fertiliser and pesticides.
- Ideal for use at renovation.
- Non-ionic surfactant.
- Use where broadcast application required.
- Long term release.

Benefits

- Ease of application – can be spread by hand for problem areas or using a fertiliser type spreader for large areas such as fairways, playing fields etc.
- Does not require watering-in as rainfall or normal irrigation is sufficient.
- Visible after application which means no areas are missed.
- Ideal for spring renovations.
- Uniform particle size for even, accurate spreading.
- Can be used in composting, potting mix and potential amendment blends.
- Diatomaceous earth particle which is capable of being “reloaded” with a boom treatment.

General information

An easy to use high quality granular wetting agent which is easy and accurate to spread. It can be used at renovation as a soil incorporated wetting agent and then followed by a quality wetting programme such as Restore liquid, Aquaforce or Bi-Agra as part of an excellent summer wetting programme.

Application rates

1.5 kg/100 m² for monthly applications or up to 3.3 kg/100 m² for a 90 day programme.

Use the low rate for maintenance or as a base for foliar programme and the higher rate for premium results.

Note: The performance of this product will be enhanced by using it in combination with other products in our soil wetting range as a programme. As with all soil surfactants, the earlier a programme is commenced in the spring the better the control of dry patch over the summer months.

Pack size: 25 kg.

The turf to stage the world's greatest endeavours.
