

Andersons Paclo Pro® 31-1-6 (31-3-7 Oxide)

Benefits

- 4.2 g/kg paclobutrazol (turf growth regulator) for *Poa annua* suppression.
- 50% MUtech™ (slow release) nitrogen (6 - 10 weeks slow release).
- For suppressing *Poa annua* growth (in bentgrass, zoysiagrass, Kentucky bluegrass and perennial ryegrass) while turf feeding with slow release nitrogen and available potassium.

Paclo Pro® 31-1-6 is in a ready-to-apply formulation of slow release nitrogen fertiliser and paclobutrazol turf growth regulator. The paclobutrazol acts by suppressing the *Poa annua* (discolouration yellow to brown) allowing the desirable species to grow through and around the stunted plants, thus achieving domination over a period of time. In addition, the use of this product will reduce the vertical height of the desired species encouraging a tighter growth habit and more even colour. Overseeding is recommended to hasten the conversion from *Poa annua* to the preferred grasses.

Application rates

Apply at 9.5-14 g/m² (95-140 kg/ha) for a maximum of three applications per year. Apply to dry turf as an even coverage. Water it in with at least 6 mm of water within 24 hours of application. For general applications use the higher rate indicated - use the lower rate when the percentage of *Poa annua* is so high that the resultant yellowing and retardation would be too extensive to be acceptable.

Pack size: 20 kg (50 bags per tonne).

The turf to stage the world's greatest endeavours.

Guaranteed analysis

31.0% Total nitrogen

1.2% Ammoniacal nitrogen

16.7% Urea nitrogen

5.4% Water insoluble nitrogen

7.8% Other water soluble nitrogen from methylene ureas

1.0% Available phosphate (P²O⁵) from ammonium phosphate

6.0% Soluble potash (K²O) from potassium sulphate

2.4% Total sulphur (S) from sulphate

Caution: Use only in spring and autumn when grasses are growing actively and do not apply to grasses that may be stressed from heat, cold or lack of moisture. Do not apply more than two spring applications and one autumn application. Do not scarify or top-dress greens while *Poa annua* is undergoing growth regulation. Please read the other critical comments on the label very carefully before using this product.
