Sand-Aid® Granular Seaplant Meal

- Natural organic amendment to be soil incorporated during renovation and aerifying.
- Extraordinary source of nutrients – contains every major, secondary and micro nutrient known to play a role in turfgrass management.
- Improves quality, appearance, playing characteristic and ability to withstand stress and disease.

Benefits

- Solves many of the problems associated with high sand content turf areas.
- Five times more capacity (CEC) than peat.
- Stimulates microbial activity and won't "layer".
- Increases moisture and nutrient retention.
- Micronutrients and trace elements are all calculated.
- Environmentally safe, non-toxic, non-contaminating and biodegradable.

General information

Sand-Aid® is an extraordinary source of nutrients, secondary micronutrients and trace elements. Sand-Aid® improves moisture and nutrient retention, is cost effective and often assists in reducing disease pressure. It has an extraordinary level of CEC and contains 52% simple plant carbohydrates which can be used by the plant in stress periods so it makes a dramatic difference in overall turf grass stress tolerance. Greatly increased root growth in sand mediums experienced with this product.

Application rates

For construction of sand (USGA) specification greens:
200-250 g/m² (2000-2500 kg/ha).

For renovation/aerifying: Apply 30-50 g/m² (300-500 kg/ha) while aerification holes are open and work material in thoroughly.

For topdressing: 25 g/m² (250 kg/ha). Read instructions on label when topdressing.

Pack size: 22.68 kg bags.
