

Andersons Nutri DG 28-0-5 (28-0-6 Oxide)

Benefits

- Dispersible Nutri DG granule technology.
- No mower pick up, saving up to 25% of normal application.
- No player shoe or ball contamination.
- 59% MUtech™ methylene urea.
- Quick turf response, plus slow steady feeding, ideal after turf renovation.
- Uniform particle size, very consistent spreading.

Nutri DG 28-0-5 is made from 59% MUtech™ in a break through dispersible granule technology. As little as 3-5 mm of irrigation will see the product completely washed into the turf surface, leaving no residual for mower pick up or burning (by players feet). With significant “up front” fertiliser, this product is an ideal post-renovation choice.

Application rates

Apply at 15-25 g/m² (150-250 kg/ha) as required.

Apply to turf and follow with 3-5 mm of irrigation to thoroughly water it in immediately after application. Use the higher rate for slow release longevity.

Pack size: 20 kg (50 bags per tonne).
