

PGW Sports Mix 17-2-17 + 1% Fe

Benefits

- Excellent nitrogen to potassium ratio.
- Competitively priced fertiliser.
- Excellent choice for budget turf surfaces, sports fields, school grounds and fairways.
- 1% Fe for immediate colour response.

PGW Sports Mix 17-2-17 plus 1% iron is an economical way of applying nitrogen fertiliser to broad acre sports turf. The two forms of nitrogen in this product gives some delayed release of nitrogen (though not a slow release) and many customers report excellent early season results in bringing up nutrient levels after a wet and depleting winter. The economical price of this high nitrogen fertiliser means it has become the choice of many schools and broad acre turf managers whose budgets restrict the use of more expensive slow release fertilisers. PGW Sports Mix 17-2-17 also contains 1% iron which gives a colour response.

Application rates

Apply at 20-25 g/m² (200-250 kg/ha) as required. Apply to dry turf and follow with sufficient irrigation or rainfall to wash into the turf surface.

Caution: This product may burn if not washed in after application.

Guaranteed analysis

- 17.0% Total nitrogen
 - 11.1% Ammoniacal nitrogen
 - 5.9% Urea nitrogen
- 2.0% Available phosphate (P2O5)
- 17.0% Soluable potash (K2O)
- 12.6% Sulfur (S)
- 2.0% Iron (Fe)

DERIVED FROM: Ammonium sulphate, urea, muriate of potash, monoammonium phosphate, and iron sucrate.
