

AQM® Tougher Turf

100% active wetting agent/fortified kelp blend

- Encourages root development and root mass.
- Improves stress tolerance.
- Anchors sod and new sprigs.
- Provides relief from water deficit stress.

Benefits

With the use of AQM® Tougher Turf, the golf course superintendent will also address the issue of water availability to the plant. AQM Tougher Turf balances the benefits of its seaweed extract component with a highly effective soil surfactant.

When AQM Tougher Turf is applied to turfgrass, its surfactant components attach to the non-polar sites on hydrophobic soil particles to provide:

- Uniform movement of water into and through the soil matrix.
- Patterns of wetting and re-wetting that will improve the amount of water in the root's zone of absorption to meet transpirational and metabolic demands of the plant.
- Long lasting surfactant activity.

General information

AQM Tougher Turf is a “balanced for performance” product that contains the proper ratios of cytokinins and auxins especially beneficial to root establishment, development, and growth when sprigging or sodding. AQM Tougher Turf provides relief from water deficit stress because of the surfactant addition for increasing transpiration capabilities of turf.

Application rates

Tank mix 9.5 ltrs AQM Tougher Turf liquid per hectare in 400-800 ltrs of water. Apply every 15 to 30 days during periods where environmental conditions favour both leaf and root growth.

Use AQM Tougher Turf Pellets at the rate of one pellet per 1100 m². Apply every 15 to 30 days.

Pack size: 9.46 litres or box of 6 pellets (6 x 26.8 g).
