

DuraVeg[®] Southern Mix

Key features:

- Drought tolerance
- Compability with varying soils
- Quick germination
- Contains species commonly used in revegetation and suited to NSW coastal region
- Suitable for mixing with all Profile Wood Fibre Hydromulch products

DuraVeg[®] Southern Mix contains a blend of fast establishing hardy species ideal for sowing into Central Coast revegetation areas and sites under development. Often these sites have limited water and nutrient supply. DuraVeg Southern Mix has been devised for the climate and conditions of Australia's Southern states and will help achieve revegetation at an economical price. Other species can be mixed into these blends, or tailored blends can be mixed if required, but are subject to our blending time frames.

Proven systems that reclaim and restore environments.
